-!- FUNCTIONAL HIS PROTEIN IS A MULTIFUNCTIONAL ENZYME ABLE TO
ACTIVATE AND POLYMERIZE THE AMINO ACIDS LEU, GLU, ASP AND VAL.
ACTIVATION SITES FOR THESE AA CONSIST OF INDIVIDUAL DOMAINS.
-!- COPACTOR: Contains 3 covalently bound phosphopantetheines.
-!- PATHWAY: Cyclic peptide antibiotic surfactin biosynthesis.
-!- SIMILARITY: Belongs to the ATP-dependent AMP-binding enzyme
                                                                                                                                                                                                    SEQUENCE OF 1-38 FROM N.A.

SUBCELLULAR LOCATION: Secreted (Potential).

TISSUE SPECIFICITY: EXPRESSED IN A GRADIENT IN THE DEVELOPING LIMB BUD EPITHELIUM DURING TI PIONEER AXON OUTGROWTH.

SIMILARITY: Belongs to the semaphorin family.

SIMILARITY: Contains 1 Sema domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE=Embryo;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         --- PATHANY: Required both in major phosphorylated pathway of serine blosynthesis and in the blosynthesis of pyridoxine.
--- SUBCELIULAR LOCATION: Cytoplasmic (By similarity).
--- SIMILARITY: Belongs to class-V of pyridoxal-phosphate-dependent
                                                                                                                                                                                                                                               Morelli G., Malorny B., Mueller K., Seiler A., Wang J.-F., del Valle J., Achtman M.; "Clonal descent and microevolution of Neisseria meningitidis during 30 years of epidemic spread.";

                                                                                                                                                                                                                                    Unpublished observations (JUL-2001).

--- FUNCTION: Uses Mg-ATP and reduced ferredoxin to reduce ring D of protechlorophyllide (Pchilde) to form chlorophyllide a (Chlide).

This reaction is light-independent.
--- PATHWAY: Light-independent bacteriochlorophyll biosynthesis.
--- SHENUIT: Protechlorophyllide reductase is thought to be composed of three subunits; both, both and bohs. Homedimer of both subunit.

(By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
from purified bohl and bohN-bohB subunits. In vitro confirmation of nitrogenase-like features of a bacteriochlorophyll biosynthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 80, Application US/09106568E
Patent No. 6455248
GENERAL INFORMATION:
APPLICANT: Bhattacharjee, J.
APPLICANT: Buvarna, Kalavati
APPLICANT: Bhattacherjee, Vasker
TITLE OF INVENTION: METHODS AND REAGENTS FOR DETECTING FUNGAL PATHOGENS IN
TITLE OF INVENTION: A BIOLOGICAL SAMPLE
FILE PERENCE: 96, 247-A
CURRENT APPLICATION NUMBER: US/09/106,568E
CURRENT PILING DATE: 1998-06-29
PRIOR PLING DATE: 1998-06-29
RECORD FRIENDER: 1997-05-20
NUMBER OF SEQ ID NOS: 160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ; OTHER INFORMATION: Polypeptide segment of ACVS_EMENI shown in Figure 4. US-09-106-568E-43

Sequence 3211, Application US/09540236
Patent No. 6673910
GENERAL INFORMATION
GENERAL INFORMATION:
TITLE OF INVENTION: NOTICEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATARF
TITLE OF INVENTION: NOTICEIC ACID AND THERADEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERADEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERADEUTICS
CURRENT APPLICATION NUMBER: US/09/540,236
CURRENT FILING DATE: 2000-04-04
NUMBER OF SEQ ID NOS: 3840
SEQ ID NO 3221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2461, Application US/09540236

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 13455, Application US/09489039A
Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: GARY Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/489,039A
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 13455
LENGTH: 195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

Sequence 7056, Application US/09107532A
Patent No. 6583275
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3, Application US/08446692
; Sequence 3, Application US/08446692
; Patent No. 575351
; GENERAL INFORMATION:
    APPLICANT: Ladd, Anna
    APPLICANT: Zamb, Timothy
    TITLE OF INVENTION: Immunogenic LHRH peptide constructs
    TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
    NUMBER OF SEQUENCES: 114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;

Patent No. 5843446
GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESSEDNUBERS:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 2
S64909
N;Alternate names: hypothetical protein L2349
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Species: Ol-Aug-1995 #sequence_revision 24-May-1996 #text_change 19-Apr-2002
C;Accession: S64909
R;Pohl, T.M.
submitted to the Protein Sequence Database, May 1996
A;Reference number: S64899
A;Reference number: S64899
A;Rocession: S64909
A;Rocession: 
A;Contents: annotation; X-ray crystallography, 1.9 angstroms
C;Comment: This protein is excited by the photoprotein aequorin (see PIR:AQJFNV) emittin
C;Comment: The chromophore of this protein is formed by modification of Ser-dehydro-Tyr-
